

GAP ANALYSIS

ROADMAP FOR ISO 26262

IS YOUR COMPANY ISO 26262 COMPLIANT?

Companies seeking to achieve ISO 26262 compliance come to kVA for an ISO 26262 gap analysis. This analysis helps your organization identify the gaps between your current state and a future state of full ISO 26262 compliance, concluding with an action plan to help get you there.

kVA's gap analysis workshop is a tailored evaluation of your company's development process and work products. It provides a practical translation of ISO 26262 as applied to your unique organization, leading to a plan of actions to be taken in order to fully comply with the ISO 26262 standard.

A gap analysis offers several major benefits, including a safer product and the ability to meet demands for modules and systems with automotive safety-integrity level (or ASIL) requirements. Our goal is to offer you peace of mind that your plan to achieve ISO 26262 is efficient and well-informed.

During the gap analysis process, kVA's certified ISO 26262 experts will conduct multiple review sessions with your stakeholders, and provide multiple opportunities for Q&A.

At the end of the workshop, kVA will provide the gap analysis tool with the findings as well as the summary to your management. This includes a summarized "Red/Yellow/Green" rating scale for each applicable clause of ISO 26262, and specific recommended actions to achieve full compliance to the standard.
