

AUTOMOTIVE CYBERSECURITY

BASED ON ISO 21434 & SAE J3061

Three-Day Training with Optional CACSP Qualification Exam

SGS-TÜV Saar and kVA introduce *Automotive Cybersecurity Training* in the U.S. Over the course of three days, participants will gain an understanding of the commonalities between safety and security processes and their impact on the automotive industry. Additionally, methods of incorporating cybersecurity with the functional safety standard ISO 26262 will be covered.

1

Introduction to Cybersecurity

Day 1 training will address cybersecurity introductions applicable to the automotive industry. Participants will learn how to mitigate the risk of threats.

- Introduction to Cybersecurity
- Key Definitions of Terms
- Example Threats
- Overview of Cybersecurity Standards

2

Introduction to SAE J3061

Day 2 training will address best practices for cybersecurity development processes. Common tools and methods used for designing, verifying and validating cybersecurity will be discussed.

- Introduction to SAE J3061
- Cybersecurity Management
- Cybersecurity Lifecycle
- Comparison of SAE J3061 & ISO 26262 Lifecycle

3

Introduction to ISO 21434

Day 3 training will address cybersecurity requirements and examples from practice as they relate to road vehicles. A framework is established for product, hardware and software development processes.

- Introduction to ISO 21434
- Risk Management
- Comparison of ISO 21434 & ISO 26262 Lifecycle
- Product Development Lifecycle
- Supporting Processes

Optional CACSP Personal Qualification Exam

In the afternoon participants have the option to achieve CACSP "Certified Automotive Cybersecurity Professional" qualification by SGS-TÜV Saar. This one hour written exam consists of all multiple-choice questions.
